

COVID-19 – COORDINATED MISMANAGEMENT

Scientific Terms and Medical Protocols Overturned

FREEDOM RISING

www.freedomrising.info

In what is clearly a co-ordinated mismanagement of public health and patient care, long-established terms critical to health care and patient management in a pandemic have been redefined, in ways that handicap health professionals with misleading information, and exaggerate numbers (* below) to create and sustain the level of fear in the public.

TERM	BEFORE COVID	UNDER COVID
PANDEMIC	Until 2012 A pandemic was only declared if an infectious disease caused extremely high numbers of deaths internationally.	With COVID <i>no number of deaths is needed to declare a pandemic</i> — after SARS in 2012, Big Pharma lobbied heavily to redefine the term. ¹
YOY DEATHS	In pandemic years, year over year statistics clearly show a surge in number of deaths.	With COVID there is no significant increase in number of deaths from previous years.
SEASONAL FLU	In the fall and winter there is always annual <u>surge</u> of infections and deaths from the flu.	With COVID quite magically, seasonal flu and other respiratory diseases <i>virtually disappeared</i> .
CAUSE OF INFECTION	Under 140 year old Koch protocol, a “cause” is determined <i>only after a suspected agent of infection is isolated and proven</i> . ²	With COVID Koch principles are utterly ignored. ³ <i>No lab in the world has isolated any agent shown to cause COVID symptoms. The virus is unproven.</i>
CASE	The term “case” is applied only to a person <i>with symptoms after testing has determined</i> what is causing the symptoms.	With COVID people who have no symptoms are randomly tested and labelled “cases” by a PCR test universally known to generate false positives.*
HEALTHY	People with no infections or symptoms are generally considered “ <i>healthy</i> ”, and as such <i>represent no health threat to others</i> .	With COVID authorities using studies based on meaningless PCR tests tell us people with no symptoms can threaten others with contagion ^{4 5 *}
IMMUNITY	People recovered from an infection are <i>immune and require no vaccination</i> for protection from future exposure.	With COVID <i>to be considered immune one must be “immunized “with a jab that even its makers say will not give immunity or prevent spreading.</i>
HERD IMMUNITY	When immunity in a population is broad enough a infection can no longer spread.	With COVID even though falling numbers of deaths suggest herd immunity we’re told COVID is spreading.
TESTING	Diagnosis is done with tests using procedures that consistently identify infectious agents with a high degree of reliability.	With COVID diagnosis is by a “test” <i>not to be used for diagnosis</i> , following guidelines that ensure up to 100% false positives, and guarantee useless results.*
ISOLATION	Isolation procedures and mask protocols are employed selectively on those who are ill and identified as vulnerable for their protection	With COVID <i>healthy people, including those with near zero risk of infection or spreading, are isolated and subjected to inappropriate and misapplied testing.*</i>
CAUSE OF DEATH	The prevailing condition or event that caused someone to die is listed in a death register as the “cause of death”.	With COVID even when other factors were the cause. it is often listed as cause of death. <i>Deliberate financial and political incentives are used to inflate the numbers.</i> ^{7 *}
VACCINE	The term “vaccine” refers to a weakened form of a virus or bacteria used to stimulate an immune response that protects the body if it ever encounters the same infectious agent.	With COVID “vaccine” refers to <i>patented synthetic experimental gene technology</i> that alters DNA in body cells in ways that will stimulate the immune system to attack its own body when it is infected again. ⁸
