

COORDINATED CONTRADICTIONS

COVID Care Overturns Accepted Science and Medical Protocols

During COVID-19 long-established terms and procedures critical to public health management and patient care in a pandemic have been radically redefined in ways that dramatically handicap health professionals with conflicting and misleading information, certain to create and sustain fear in the public. (See items marked with*)

TERM	BEFORE COVID	UNDER COVID
PANDEMIC	Until 2012 A pandemic was only declared if an infectious disease caused extremely high numbers of deaths internationally.	With COVID <i>no number of deaths is needed to declare a pandemic</i> — after SARS in 2012, Big Pharma lobbied heavily to redefine the term.*
YOY DEATHS	In pandemic years, year over year statistics clearly show a surge in number of deaths.	With COVID <i>there is no significant increase in number of deaths from previous years.</i>
SEASONAL FLU	In the fall and winter there is always annual <u>surge</u> of infections and deaths from the flu.	With COVID quite magically, seasonal flu and other respiratory diseases have <i>virtually disappeared.</i>
CAUSE OF INFECTION	The Koch protocol—used for 140 years—determined “cause” <i>only after a suspected agent of infection was isolated and proven.</i> ²	With COVID the venerable Koch protocol is ignored. ³ <i>No lab in the world has isolated any agent shown to cause COVID-19. The virus is unproven.</i>
CASE	The term “case” is applied only to a person <i>with symptoms after testing has determined</i> what is causing the symptoms.	With COVID people who have no symptoms are randomly tested and labelled “cases” by a PCR test universally known to generate false positives.*
HEALTHY	People with no infections or symptoms are generally considered “ <i>healthy</i> ”, <i>and as such represent no health threat to others.</i>	With COVID people aren’t “healthy” any more, they’re considered “asymptomatic” and possible spreaders. ^{4 5} <i>Sickness is assumed and health must be proven.*</i>
IMMUNITY	People recovered from an infection <i>have a robust immunity and require no vaccination</i> for protection from future exposure.	With COVID <i>natural immunity is ignored and to be “immunized” one must get a jab that even its makers say gives no immunity</i> and fails to prevent spreading.
HERD IMMUNITY	When immunity in a population is broad enough a infection can no longer spread.	With COVID even though falling numbers of deaths suggest herd immunity we’re told COVID is spreading.
VARIANTS	Mutations are more transmissible but weaker. They are easily limited by the immune system.	With COVID people fear variants because we’re told they spread and get increasingly dangerous.*
TESTING	Diagnosis is done with tests using procedures that consistently identify infectious agents with a high degree of reliability.	With COVID diagnosis is by a “test” <i>not to be used for diagnosis</i> , following guidelines that ensure up to 100% false positives, and guarantee useless results.*
ISOLATION	Isolation procedures and mask protocols are employed selectively on those who are ill and identified as vulnerable for their protection	With COVID <i>healthy people, including those with near zero risk of infection or spreading, are isolated and subjected to inappropriate and devastating lockdowns.</i>
CAUSE OF DEATH	The prevailing condition or event that caused someone to die is listed in a death register as the “cause of death”.	With COVID even when other factors were the cause, it is often listed as cause of death. <i>Deliberate financial and political incentives are used to inflate the numbers.</i> ^{7*}
VACCINE	By using a weakened form of a natural virus or bacteria, a vaccine—by definition—creates immunity that will protect the body if it ever encounters the same or a similar infection.	With COVID the “vaccine” is a synthetic patented experimental gene technology <i>that offers no immunity and stimulates the immune system in ways that risk its attacking its own body when it is infected again.</i> ⁸
