

THE NUREMBERG CODE 1947

WHAT WAS YOUR EXPERIENCE OF THE COVID EXPERIMENTAL “VAXXINE” IN 2021?

The 10 principles of the Nuremberg Code (below) *oblige* any doctor or official conducting a medical experiment on human subjects to ensure that consent of the human subjects is voluntary, fully informed, obtained without coercion in any form and respects their body sovereignty. These principles are part of medical codes world wide, in ethics and in law.

(Italics, added for emphasis [comments highlight the violations of the Code in 2021 with the COVID shot.]

1. The voluntary consent of the human subject is absolutely essential...the person involved *should have the legal capacity to give consent...*and be able to exercise free power of choice... *[in 2021: many in care homes are bullied into jabs, and children are targeted]*
 - ... without the intervention of any element of force, fraud, deceit, duress, overreaching, or other ulterior form of constraint or coercion. *[In 2021: there is shaming; police and fines are a daily threat, jabs are mislabelled “safe and effective”, employers demand jabs for jobs.]*
 - ...*should have sufficient knowledge and comprehension... to make an understanding and enlightened decision. [In 2021: people in care homes and the cognitively challenged are jabbed; school children 5-16 are targeted without parents consent.]*
 - This latter element requires *that before the acceptance of an affirmative decision* by the experimental subject [the subject] should be told:
 - *the nature, duration, and purpose of the experiment; [In 2021: Most aren't told this experiment runs until 2023.]*
 - *the method and means by which it is to be conducted; [In 2021: An experimental gene therapy is marketed to the public fraudulently as a “vaccine”.]*
 - *all inconveniences and hazards reasonably to be expected; [In 2021: People are not told the shot may cause shedding and affect the people around them.]*
 - *the effects upon his health or person which may possibly come from participation in the experiment. [In 2021: Full list of known adverse events isn't given.]*
 - The duty and responsibility for ascertaining the quality of the consent rests upon each individual who initiates, directs, or engages in the experiment. *It is a personal duty and responsibility which may not be delegated to another with impunity. [In 2021: This means doctors, nurses, pharmacists— anyone—administering shots can be held liable. (Learn more.)]*
2. The experiment should be such as to yield fruitful results for the good of society, *unprocurable by other methods or means of study, and not random and unnecessary in nature. [In 2021: Cures are known and withheld. Doctors using them are disciplined and forbidden to speak of them.]*
3. The experiment *should be so designed and based on the results of animal experimentation and a knowledge of the natural history of the disease or other problem under study that the anticipated results justify the performance of*
 - the experiment. *[In 2021: In earlier trials 100% of animals died, yet phase 3 was rolled out as “safe and effective”. Although risk, dosage, and safety levels are unknown, it is not limited preliminary research to establish risk, it aggressively targets all of humanity.]*
4. The experiment should be so conducted as to avoid all unnecessary physical and mental suffering and injury.
5. No experiment should be conducted where there is a priori reason to believe that death or disabling injury will occur; except, perhaps, in those experiments where the experimental physicians also serve as subjects. *[In 2021: Millions of vaccine deaths and injuries are denied, discounted or go unreported. Those who are permanently injured are left unheard, dismissed and abandoned.]*
6. The degree of risk to be taken should never exceed that determined by the humanitarian importance of the problem to be solved by the experiment. *[In 2021: Deaths from the jab and associated social impacts and controls are many times higher than from COVID.]*
7. Proper preparations should be made and adequate facilities provided to protect the experimental subject against even remote possibilities of injury, disability or death. *[In 2021: Pharmacy and pop-up clinics have no system of follow up. Actual injuries go unreported.]*
8. The experiment should be conducted only by scientifically qualified persons. The highest degree of skill and care should be required through all stages of the experiment of those who conduct or engage in the experiment. *[In 2021: Most giving the jab are ad hoc administrators unaware of the context of the experiment, not trained to understand “consent” or risks of the jab.]*
9. During the course of the experiment *the human subject should be at liberty to bring the experiment to an end if he has reached the physical or mental state where continuation of the experiment seems to him to be impossible. [In 2021: Those vaxxed are effectively denied the right to decline the boosters, even if they've suffered adverse events.]*
10. During the course of the experiment **the scientist in charge must be prepared to terminate the experiment at any stage, if he has probable cause to believe, in the exercise of the good faith, superior skill and careful judgment required of him, that a continuation of the experiment is likely to result in injury, disability, or death to the experimental subject.** *[In 2021: Deaths in 9 months from the COVID medical experiment exceed deaths in 30 years from all vaccines.]*
